Introduction

The Video Refereeing System has quickly become a must-have tool for Referees and Fencers. As already in use for the FIE Grand Prix and World Cup events, now the system is available for a more efficient training. In addition, the software automatically marks actions and hits that have triggered a replay making those decisive actions available for systematic review. Image is recorded and displayed in high definition and of course Sound is available for the referee as well.

The Software is FIE homologue. Coaches but also Referees benefit from the recording and replay tool as it is perfectly suitable for analysing and archiving competition and training sessions.

Keyfacts

-  plug and play equipment
-  full automatic mode with data connection to each scoring apparatus (Supported brands are Allstar, SG31/Wireless, SG21, Favero FA07, Favero FA05, EFU 4)
-  The number of repetitions and the replay speed are variable
-  The entire clip includes sound and metadata like scoring lamp indicators, scores and time are saved on the hard disk and can be used for high efficient post-analysing process
-  compatible with our fencing vision results system & video statistics application

All bouts are permanently recorded in HD by highly specialized and state of the art video equipment. The components fit the FIE requirements without any limitations of quality or distances.

Package contents
